

Procur3d Consulting

Carbon Reduction Plan

Publication date: April 2022

Commitment to achieving Net Zero

Procur3d Consulting is committed to achieve net zero by 2050.

In order to do so we will focus on:

- Energy efficiency complemented by using renewable energy generation.
- Waste management.
- Our transport and hybrid working strategy.
- Staff wellbeing with a carbon reduction focus.

Baseline Emissions Footprint

Baseline emissions are a record of the greenhouse gases that have been produced in the past and were produced prior to the introduction of any strategies to reduce emissions. Baseline emissions are the reference point against which emissions reduction can be measured.

Baseline Year: 2022	
Additional Details relating to the Baseline Emissions calculations.	
Procur3d Consulting has no previous reporting on its carbon baseline. We are a relatively new company which in its second year of operating has set about creating its baseline as well as a strategy for reducing our carbon emissions. The Baseline Emissions calculated are a holistic overview of Procur3d Consulting Ltd's total carbon emissions from all services provided in 2022, including; Scope 1, Scope 2 and Scope 3 emissions.	
Baseline year emissions:	
EMISSIONS	TOTAL (tCO₂e)

Scope 1	2.9
Scope 2	8.9
Scope 3 (Included Sources)	5.6
Total Emissions	17.4

Current Emissions Reporting

Reporting Year: 2022	
EMISSIONS	TOTAL (tCO₂e)
Scope 1	2.9
Scope 2	8.9
Scope 3 (Included Sources)	5.6
Total Emissions	17.4

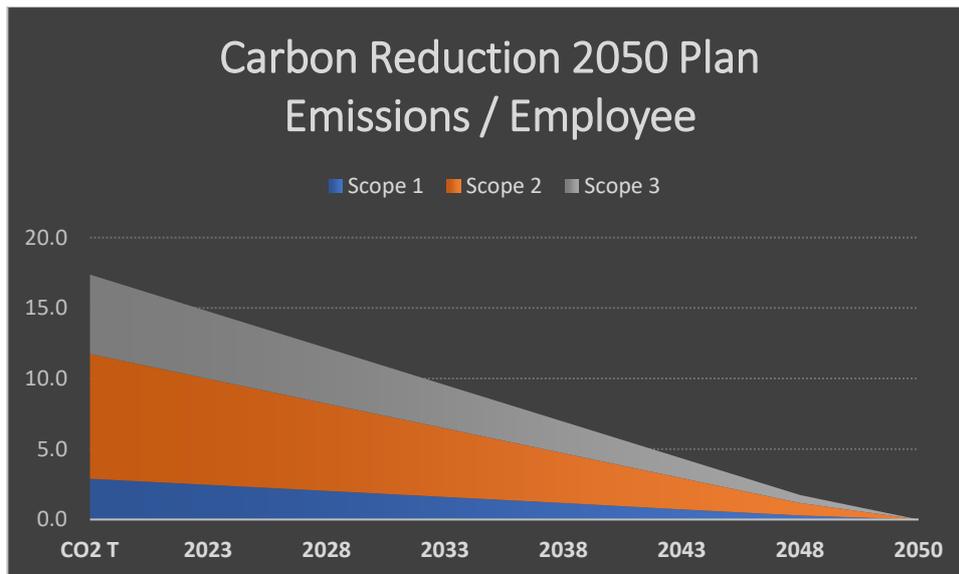

Emissions reduction targets

This is our first year which we have used to create our carbon baseline. Our approach will be to reduce our carbon emission per employee. We project that carbon emissions will decrease over the next five years to 2.6 tCO₂e per employee by 2028. This is a reduction of 15%

In order to continue our progress to achieving Net Zero, we have adopted the following carbon reduction targets.

- CO₂ emissions/employee to decrease year-on-year until the year 2030.
- Total CO₂ emissions to decrease year-on-year from the year 2030 to 2040.
- Net Zero emissions to be achieved by 2050.

Projected progress against targets will be tracked using the following graphs:

**Scope Areas 1-3 will be measured collectively rather than individually.*

Carbon Reduction Projects

Completed Carbon Reduction Initiatives

The following environmental management measures and projects will be completed in the future. The carbon emission reduction achieved by these schemes equate to 2.4 tCO₂e, a 15% reduction against the 2022 baseline and the measures will be in effect when performing the contract

In the future we hope to implement further measures such as:

Management Systems: We will achieve GreenMark certification (an alternative to ISO14001) in the next year. This will provide us with the process and procedures to implement a number of carbon reduction/offsetting initiatives and help us track our emissions.

Training & Engagement:

We will engage our employees and entire supply chain demonstrating our commitment to Net Zero Emissions by 2050. We will keep them informed of our carbon reduction strategies and plans will enable them to cooperate and reduce their emissions in turn. We will

- Use internally briefings to regularly discuss and share energy efficiency tips.
- Implement carbon friendly initiatives (such as office plants or green walls)
- Articles and blogs – to encourage green modes of transport
- Short animations and posts on social media to raise awareness.
- Company incentives to employees to encourage a 'green culture'.

Travel:

Where reasonable and safe to do so, our staff will be asked to use carbon friendly alternatives to travel. This may include hiring electric vehicles rather than diesel. Using the

train instead of car and so on. As part of our pre-expense approval process we will include carbon reduction as part of the process.

Equipment:

We are committed to utilising energy efficient solutions where possible. We will assess all equipment, and where practicable to do so we will procure energy efficient equipment such as:

- Computers
- Monitors
- Chargers
- printers

We will also encourage employees to use wall socket timers to ensure computers are turn off at night when they're not being used.

We will also look at office improvements, such as using LED lighting, where we can get the property owner's permissions to do so.

Recycling

Where products can be recycled, we will take every step necessary in ensuring this happens. We will work with our customers and suppliers to ensure that we implement measures to minimise waste.

Carbon Offsetting

Carbon offsetting will play an important part in our strategy. We will invest in schemes that reduce carbon but also improve the natural environment. These schemes will be selected annually with money allocated in each year's budget.

Declaration and Sign Off

This Carbon Reduction Plan has been completed in accordance with PPN 06/21 and associated guidance and reporting standard for Carbon Reduction Plans.

Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard¹ and uses the appropriate Government emission conversion factors for greenhouse gas company reporting².

Scope 1 and Scope 2 emissions have been reported in accordance with SECR requirements, and the required subset of Scope 3 emissions have been reported in accordance with the published reporting standard for Carbon Reduction Plans and the Corporate Value Chain (Scope 3) Standard³.

This Carbon Reduction Plan has been reviewed and signed off by the board of directors (or equivalent management body).
